

# PROBLEMS

## Most common problems of tent settlements

**HOW WAS THIS MAP PREPARED?**  
Field data collection forms were filled by Development Workshop field experts, based on declarations of participants from the 59 tent settlements which were visited in February - March 2017. The collected data are reflected on the map.

# CURRENT SITUATION MAP OF SEASONAL AGRICULTURAL WORKERS' TENT SETTLEMENT AREAS IN THE ADANA PLAIN

## Distribution of tent settlements on Adana Plain by size (February 2017)

Number of Tents	Number of Settlements
1-20 Tents	16
21-40 Tents	17
41-60 Tents	8
61-80 Tents	4
81 and above tents	14
<b>Total</b>	<b>59</b>

## Total Number of Tents in the Adana Plain and Household Population Data (February 2017)

Name of District	Number of Tents			Estimated Household Population Data (February 2017)				
	Syrian	Turkish	Total	Syrian	Turkish	Total		
Karatas	1,617	466	2,083	49.2	9,217	2,664	11,871	5.7
Seyhan	232	60	292	6.9	1,328	348	1,676	5.7
Yumurtalik	276	149	425	10	1,573	849	2,422	5.7
Yuregir	1,212	222	1,434	33.9	6,688	1,263	7,951	5.5
<b>Total</b>	<b>3,337</b>	<b>897</b>	<b>4,234</b>	<b>100</b>	<b>18,806</b>	<b>5,114</b>	<b>23,920</b>	<b>5.6</b>

## Average distance of the tent settlements to;

## THESE ARE 59 TENT SETTLEMENTS IN THE ADANA PLAIN

## TENT SETTLEMENT RISK STATUS

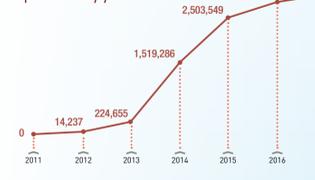

Tent settlements on the Adana Plain are found mainly near main or side roads, main irrigation canals or drainage canals. Some of the settlements are in the vicinity of neighbourhoods / villages. Risks, in which children are most susceptible, like physical injuries, poor living conditions, and illnesses, need to be identified in the settlements. In the evaluation of these risks, 11 criteria were used, with one being the lowest and nine being the highest mark. Criteria not relevant to particular tent settlements were given "zero" points. The total score of the tent settlements was evaluated on a scale of 99 and categorized as below:

## Risks

Risks	Definitions
Being near drainage canals	The distance of a tent settlement to the area's drainage canal is the basis of the score. Tent settlements close to drainage canals score the highest marks. If the settlement is far away from the canal, distance a child cannot reach by foot, then zero points are given.
Being near main roads	Main roads are where the major roads in an area intersect with high traffic density. Scores reflect the distance of the tent settlement to the side of the main road. Tent settlements in the vicinity of the main road score the highest marks. If the settlement is far away from the main road, distance a child cannot reach by foot, then zero points are given. Main roads in this content are the roads from Seyhan and Yuregir to Karatas, Tuba and Yumurtalik districts.
Being near side roads	Side roads connect to main roads and are comparatively low in traffic density. Scores reflect the distance of the tent settlement to side roads. Tent settlements in the vicinity of side roads score the highest marks. If the settlement is far away from side roads, distances a child cannot reach by foot, then zero points are given. Side roads in this content are the asphalt or dirt roads between the neighbourhoods/villages on Adana Plain.
Being near main irrigation canals	The Adana Plain has large irrigation canals. Canals are deep, greater depths than the average height of a human, and currents are rapid. Scores reflect the distance of the tent settlement to the irrigation canal. Tent settlements in the vicinity of the main irrigation canal score the highest marks. If the settlement is far away from irrigation canals, distance a child cannot reach by foot, then zero points are given.
Being near the riverside	There are two major rivers in the Adana Plain: Ceyhan and Seyhan. Scores reflect the distance of the tent settlement to these rivers. Tent settlements in the vicinity of the rivers score the highest marks. If the settlement is far away from the rivers, distance a child cannot reach by foot, then zero points are given.
Being near the seaside	South of the Adana Plain is the Mediterranean Sea. The Mediterranean Sea has a very long shore to the plain. The Karatas and Yumurtalik districts have long coasts on the sea. Scores reflect the distance of the tent settlement to the sea. Tent settlements in the vicinity of the sea score the highest marks. If the settlement is far away from the sea, distance a child cannot reach by foot, then zero points are given.
Presence of garbage in the tent settlement	Tent settlements with no garbage removal services receive the highest marks. If regular, everyday disposal is in place, the score result in zero points.
Presence of street lighting	Tent settlements with no street lighting score the highest marks, while those with permanent lighting receive zero points.
Risk of Natural Disasters	Scores reflect the potential of a natural disaster such as rainfall, flooding, strong winds (whirlwinds) and lightning strikes, hitting a tent settlement. The higher risk of a natural disaster occurring results in a high score. If the risk is non-existent, then zero points are given.
Presence of reptiles, rodents and bugs	Scores reflect the presence of reptiles, rodents, and bugs. If these creatures are present, the tent settlement receive high marks. The absence of these creatures result in zero points.
Presence of other risks	High scores reflect the presence of other risks in tent settlements, such as isolation from residential areas, location near auxiliary irrigation canals, the presence of swamps, industrial plants, liquid, dust or gaseous waste.
